### What Happened

OPM recently discovered **two separate but related cyber-security incidents** that have impacted the data of Federal government employees, contractors, and others:

1. In April 2015, OPM discovered that the **personnel data of 4.2 million current and former Federal government employees had been stolen**. This means information such as full name, birth date, home address and Social Security Numbers were affected. This number has not changed since it was announced by OPM in early June and **you should have already received a notification if you were impacted**.
2. While investigating this incident, in early June 2015, OPM discovered that additional information had been compromised: including **background investigation records of current, former, and prospective Federal employees and contractors**. OPM and the interagency incident response team have concluded with high confidence that sensitive information, including the Social Security Numbers (SSNs) of 21.5 million individuals, was stolen from the background investigation databases. This includes 19.7 million individuals that applied for a background investigation, and 1.8 million non-applicants, primarily spouses or co-habitants of applicants. Some records also include findings from interviews conducted by background investigators and approximately 1.1 million include fingerprints. Usernames and passwords that background investigation applicants used to fill out their background investigation forms were also stolen. **Notifications for this incident have not yet begun**.
